Submission Requirements (Part 2)

For this part of the tutorial, you are required to submit the following:

- Add some custom documents of your own to the `docs` directory and test the chatbot with these documents. Share a screenshot of the chatbot response to a user query based on the custom documents.

- Use 2 different LLMs (of your choosing) to generate responses to user queries. Share a screenshot of the chatbot response to a user query using each LLM.

- Share the code for the `server.jac` file that includes the RAG module and the MTLLM model where you use the 2 different LLMs. You can submit one file with the code for both LLMs.
